

```
$ ssh myserver  
Welcome to Ubuntu!  
navneet@navneet:~$
```

SSH Setup Guide

VirtualBox Server • Passwordless Login
Bilkul AWS EC2 Jaisa!

Main OS

Server

Headless

SSH

gungun-navneet -> navneet@192.168.31.100

01

Main OS

SSH Key Banana

```
$ ssh-keygen -t rsa -b 4096
```

RSA 4096-bit key pair banata hai.
~/.ssh/id_rsa (private) | ~/.ssh/id_rsa.pub (public)

02

Main OS

Public Key Server Pe Copy Karo

```
$ ssh-copy-id -i ~/.ssh/id_rsa.pub  
navneet@192.168.31.100
```

Public key server ke authorized_keys mein dalta hai.
Bas ek baar — phir password kabhi nahi!

03

Main OS

Server Se Connect Karo

```
$ ssh navneet@192.168.31.100
```

Bina password ke server se connect karta hai.
Key setup ke baad seedha andar!

04

Main OS

SSH Config File Banana

```
$ nano ~/.ssh/config
```

Shortcut banata hai:
Host myserver | HostName 192.168.31.100 | User navneet

05

Main OS

Shortcut Se Connect Karo

```
$ ssh myserver
```

Config file ka use karke connect.
AWS EC2 jaisa feel!

06

Server ke andar

Server Band Karo

```
$ sudo poweroff
```

Server ko safely shutdown karta hai.
Pehle SSH se andar jao, phir chalao.

07

Main OS

Headless Mode Start Karo

```
$ VBoxManage startvm "Ubuntu"  
--type headless
```

VM bina window ke background mein start.
Bilkul AWS jaisa — sirf SSH se access!

08

Main OS

Normal GUI Mode Start Karo

```
$ VBoxManage startvm "Ubuntu"  
--type gui
```

VM ko normal VirtualBox window ke saath
start karta hai.
